

Tips, Formulae and shortcuts for Logarithms, surds and indices

By

CRACKU.IN

Cracku Tip 1 – Logarithms, Surds and Indices

- "Logarithms, Surds and Indices" is one of the easiest topics in the quantitative section of the CAT exam.
- Although the number of formulae is high, the basic concepts are very simple to understand and apply.
- There are no shortcuts to remember and the scope of the questions that can be asked is very limited.
- The accuracy of answering questions from this section is very high and good students tend to score very well here.

Cracku Tip 2 - Logarithms, Surds and Indices

If X,Y > 0 and m,n are rational numbers then

$$X^m \times X^n = X^{m+n}$$

•
$$X^0 = 1$$

$$- \frac{X^m}{X^n} = X^{m-n}$$

$$X^m \times Y^m = (X \times Y)^m$$

$$- \frac{X^m}{\sqrt{m}} = (X/Y)^m$$

$$- X^{-m} = \frac{1}{X^m}$$

Cracku Tip 3 – Logarithms, Surds and Indices

If X and Y are positive real numbers and a,b are rational numbers.

•
$$(X/Y)^{-a} = (Y/X)^a$$

$$X^{1/a} = \sqrt[a]{X}$$

$$X^{a/b} = \sqrt[b]{X^a}$$

Cracku Tip 4 – Logarithms, Surds and Indices

- Surd is an irrational number involving a root ex : $\sqrt{5}$, $\sqrt[3]{7}$, $\sqrt[5]{2}$
- Like surds are two surds having same number under radical sign.
- Like surds can be added or subtracted. $6\sqrt{2} + 3\sqrt{2} = 9\sqrt{2}$

Cracku Tip 5 – Logarithms, Surds and Indices

- If $a+\sqrt{b} = c+\sqrt{d}$, then a = c and b = d
- The conjugate of $a+\sqrt{b}$ is $a-\sqrt{b}$

To find $\sqrt{\sqrt{x}+\sqrt{y}}$, $\sqrt{x}+\sqrt{y}$ should be written in the form of m+n+2 \sqrt{mn} where x=m+n and 4mn=y and $\sqrt{\sqrt{x}+\sqrt{y}}=\pm(\sqrt{m}+\sqrt{n})$

Free CAT Mock Test: https://cracku.in/cat-mock-test

Cracku Tip 6 – Logarithms, Surds and Indices

If $N = a^x$ then, x is defined as the logarithm of N to base a or $x = \log_a N$ Logarithm of a negative number or zero is not defined.

- $\log_a 1 = 0$
- $\log_a xy = \log_a x + \log_a y$
- $\log_a b^c = c \log_a b$
- $log_a a = 1$

Cracku Tip 7 – Logarithms, Surds and Indices

•
$$\log_a \sqrt[n]{b} = \frac{\log_a b}{n}$$

$$\bullet \quad b^{\log_b x} = x$$

■
$$log_ab = \frac{log_cb}{log_ca}$$

■
$$\log_a b * \log_b a = 1$$

•
$$log_a(X/Y) = log_aX - log_aY$$

Cracku Tip 8 – Logarithms, Surds and Indices

- If 0 < a < 1, then $\log_a x < \log_a y$ (if x > y)
- If a > 1 then log_ax > log_ay (if x>y)
